Education

University of Waterloo — Waterloo, ON
Bachelor of Computer Science: Data Structures, Algorithms, OOP, Operating Systems — *Sep. 2024 - Apr. 2028*

Technical Skills

Languages: Java, Python, Ruby, JavaScript, TypeScript, C, C++, C#, HTML/CSS, SQL, Bash

Technologies: Git, AWS, GCP, Azure, MCP Servers, Docker, Kubernetes, Redis, Supabase, MongoDB

Frameworks & Libraries: React, Node.js, Next.js, Express.js, Tailwind, Flask, LangChain, TensorFlow, OpenCV

Experience

Essos — New York City, NY
Founding Engineering Intern | AWS, CDK, CloudWatch, TypeScript, Java, Python — *Jan. 2027 – Apr. 2027*

- Incoming full-stack engineer building the patient and clinic platform for a seed-stage healthcare startup backed by Saga Ventures and Sound Ventures

Amazon — Vancouver, BC
Software Development Engineer Intern | AWS, CDK, CloudWatch, TypeScript, Java, Python — *May. 2026 – Sep. 2026*

- Shipped **Arbor** to production, a full-stack alarm visualization platform adopted by **100+ teams** and used by **VPs and directors** to assess cross-team impact in real time during **high-severity (SEV-2+) incidents**, with 50+ daily users
- Built a **React/TypeScript** frontend and **Java Lambda** backend on **AWS**, unifying three monitoring systems (**Carnaval, CloudWatch, PMET**) behind a rate-limited concurrent batching scheduler that aggregates **1.3M+ alarms** at **p95 latency under 10s**, using exponential backoff to recover **98.3%** of throttled requests
- Architected an internal API with an optimized fetch algorithm to replace the older end-to-end history API, cutting fetch time by **45%**, now consumed by **10+ services** for on-demand history of any past SEV-2 incident
- Built a reusable **CDK construct** granting cross-account CloudWatch access via IAM role assumption, plus a code-generation integration that auto-detects a stack and opens a PR, reducing partner onboarding to a single approval

Atelier — Miami, FL
Co-Founder | AWS, Node.js, Redis, LangChain | Website — *Dec. 2025 – Apr. 2026*

- Co-founded an **AI-driven product analytics start-up** backed by **Telora with $60,000 in funding**, serving **10+ customers** across **10+ connected websites**, turning analytics into automated feature improvements
- Designed an end-to-end analytics ingestion pipeline that integrated data from **10+ analytics providers** into an LLM
- Developed an AI-driven feature generation engine using LangChain that produced **10K+ deployable UI/UX code changes**, **doubling user interaction** on the interfaces it edited and eliminating manual iteration
- Architected the backend on **AWS** with **Node.js** and **Redis**, caching analytics and LLM responses to cut per-analysis cost by **50%** (saving **$2,000+** across 10K+ analyses) and reduce latency from **4s to 200ms**

BlueDot — Toronto, ON
Software Engineer (Intern to Part-time) | Python, Azure, Selenium, BeautifulSoup, Docker — *May. 2025 – Nov. 2025*

- Architected a new **ETL pipeline** with **Python** and **Azure** to process data, reducing ingestion time by **56%**
- **Cut manual data work by 37%** for epidemiologists through this pipeline, saving the company **$150,000** per year
- Built transformations using Azure, increasing data throughput by **50 GB** per day through parallel task execution
- **Scraped unstructured data** using **Selenium** and **BeautifulSoup**, improving coverage of external sources by **47%**
- **Optimized** data storage and retrieval in Azure through **caching and indexing**, cutting access latency by **71%**
- Automated **deployments** with **Docker** and Azure DevOps CI/CD pipelines, boosting release frequency by **22%**

Projects

BeyondSight (Hack the North Winner) | ***Python, SLAM, YOLO, Whisper, Docker*** — Sep. 2025

- Selected as a track winner out of **2,000+ hackers** and **300+ projects** at Canada's largest hackathon: **Devpost**
- Built a full-stack **hardware + AI system** enabling navigation and communication for individuals who are deafblind using **AI-powered** text-to-speech and speech-to-text, a **vest with haptic motors** and a **braille-enabled gauntlet**
- Integrated **OpenAI Whisper** for speech recognition with in-house optimizations that improved transcription accuracy by **15%** and reduced latency by **21%**

FATELESS Studios (Hack the Valley Winner) | ***Python, MCP Server, Gemini*** — Oct. 2025

- Selected as a track winner out of **750+ hackers** and **100+ projects** at one of Canada's largest hackathons: **Devpost**
- Developed an **MCP-powered AI pipeline system** infinitely automating the generation of **entire games** from character/cutscene/background generation, animation and gameplay logic, to player decision management in real time
